EXPERIENCE

Software Development Engineer-1 ShareChat

April 2025 - Present
Bangalore, India

- Optimized a **high-throughput Go** notification dispatch pipeline, increasing throughput from **1M to 2.4M** notifications per 2 minutes (+140%), while reducing peak pods from **10 to 3** (-70%) and memory from **11 Gi to 6 Gi** (-45%) using **profiling, HPA/GC tuning**, worker pools and faster JSON *serde*.
- Built a custom **Go-based Scylla** migration framework for **3B rows**, sustaining **444K reads/s** and **438K writes/s** concurrently, reducing full-table migration time from **8+ hours to 1h 54m**.
- Executed large-scale notification migrations: **540M notifications/day** across **six slots**, each serving **90M notifications** in **30 minutes**; also worked on **CDC-based migrations** to support continuous data movement and low-risk cutovers.
- Diagnosed and fixed a production **memory leak** in a critical platform **Go/Scylla** db driver using **Google profiling**, traced the issue to non-deterministic Go's map iteration. Published a stable version with **zero OOMs** and stablized memory consumption.
- Led **debugging** during **Redis-to-Dragonfly** migration, isolating a **Lua** numeric-conversion incompatibility that caused pod restarts, repeated retries and DLQ growth, implemented safe timestamp normalization and restored stability.
- Contributed to AI-powered notification targeting/optimization that improved notification **CTR by 8%**, and drove end-to-end debugging of critical production issues that recovered affected DAU.
- Designed and implemented multiple scalable and resilient **distributed systems** using **Kubernetes, Golang** and **GCP**, and optimizing system performance and latency.
- Skills Gained : Golang, NodeJs, K8S, GCP, Grafana, Profiling.

Software Development Engineer Intern ShareChat

August 2024 - March 2025
Bangalore, India

- Worked on notification systems serving **2 billion notifications a day** to **100M monthly active users** across ShareChat/Moj.
- Contributed towards migration of legacy API/Components from nodeJS to Golang.

EDUCATION

BTech Information Technology. CGPA – 9.3 , Maharaja Agrasen Institute of Technology, New Delhi 2020 - 2024

PROJECTS

High Throughput Data Migration

ShareChat

- Developed a custom go pipeline to transfer **3 Billion+ rows** from one database to another.
- Achieved **500K writes/s** by using **Scylla's** token ring architecture along with **5M reads/s** for cross table data verification.
- Reduced TAT for transfer from **8+ hours to 1h 54m**.

Portfolio Website

Self

- Designed, developed and deployed a responsive portfolio website.
- **Project Link** : [Portfolio](#)

ACHIEVEMENTS / AWARDS

- Awarded "**Rockstar Rookie**" - For optimizing FCM dispatch service by **100%**.
- Awarded "**Customer Success Champion**" - For debugging & fixing a high sev memory leak in core DB driver library.

TECH STACK

- **Golang/NodeJs, Scylla/BigTable**, MySQL/Spanner, BigQuery, Redis/Dragonfly, Kafka/Redpanda/Warpstream/**Pubsub**, **Kubernetes, GCP, MEM/CPU Profiling**.
